

GY-HC500/550: Does the camera provide SDI output signals when shooting in 4K?

When the camera is in the "4K" mode, you can output HD-SDI at 1080i, and HDMI simultaneously.

With firmware versions V0100-V0110, when the camera is the "4K EXT (SSD)" mode, video images were not output from the SDI OUT terminal.

Beginning with firmware V0120, HD-SDI or HDMI (selectable) is available on the 4K EXT(SSD) recording mode.
